ADVANCED AIR STERILIZER

Air sterilization without the use of chemicals

Bacteria, viruses, molds, fungi and dust mites are the common air contaminations worldwide. In the last years, these contamination segments of the air became a big threat against human and animal health. The most furious example was SARS which, in 2003, turned into an internationally disastrous situation.

Anseros developed a radical air reactor called "ADVANCED AIR STERILIZER" which provides a robust shield against any fatal microorganisms or air contamination. Based on research in chemical-free mechanisms, this technology gives you an optimum efficiency in a wide range of domains. The advanced oxidizing process of the system makes sure that germs and bad air components are terminated at discreet level.

| Odor components | Efficiency (%) |
|------------------|----------------|
| HYDROGEN SULFIDE | 97.5 |
| METHYL SULFIDE | 97.0 |
| METHYL DISULFIDE | 96.1 |
| METHYL MERCAPTAN | 100.0 |
| TRIMETHYLAMIN | 95.3 |
| AMMONIUM | 70.1 |
| STYRENE | 99.6 |
| ACETALDEHYDE | 96.3 |

| Type | Capacity [m3/h] |
|-------------|----------------------------------------|
| CAT-HO-2000 | 2000 |
| CAT-HO-8000 | 10 |
| CAT-HO-0500 | 500 |
| CAT-HO-OEM | according to customer's specifications |

Note: Please contact our R&D department for further capacities. Furthermore, we are happy to inform you about other applications of the ANSEROS CAT cleaning process.

| Applications | |
|--------------------------------|---------------------------|
| Hygiene | |
| hospitals | driving cabins & cockpits |
| airports | pools & spa areas |
| theaters | restaurants |
| hotel & banquet halls | kitchens |
| offices | |
| toilets | |
| Industrial applications | |
| sewage plants | packaging |
| junk yards | grocery markets |
| bio treatment plants | pharmaceutical |
| pump stations | recycling plants |
| chemical plants | warehouses |
| animal breeding areas | |
